

ENERGY POLICY

In meeting the defence industry needs of the Turkish Armed Forces, security forces and our other customers, we conduct our activities in alignment with the National Energy Policy and are committed to the following principles:

- Providing the necessary infrastructure, human, financial and information resources to support sustainable, renewable and green energy activities.
- Continually improving our energy performance and Energy Management System.
- Supporting ongoing improvement and training activities to raise employee awareness of energy performance and the use of natural resources.
- Increasing the share of environmentally friendly and renewable energy sources in energy consumption across all our operations.
- Supporting designs that improve energy performance while developing innovative technologies in the sector.
- Encouraging all stakeholders and business partners to improve energy efficiency and prioritising the procurement of energy-efficient products and services.
- Ensuring compliance with applicable environmental and energy-related laws, regulations, and national and international standards.

Through these principles, we aim to promote the efficient use of energy, prevent waste, reduce the economic burden of energy costs, and protect the environment.
